**TechPower** with 15% EDL plus **SICAL**. A very high performance multi-purpose fuel designed for both 2-strokes and 4-strokes. Suitable for Fixed Wing, Helis, Boats and Fun Cars.

**ProPower** with 18% EDL plus **SICAL**. Similar to TechPower but with 3% more EDL. For engines where manufacturer specifies 18% oil. Suitable for 2 & 4-strokes and the same models as TechPower.

**Dynaglo** contains 8% EDL (synthetic oil) and 2% castor oil. Dynaglo, the first universally successful synthetic oil fuel, has notched up major contest wins all over the world (and continues to do so) due to the extra power it produces plus the snappy throttling.

**Duraglo** contains 9% EDL (synthetic oil) and 6% castor oil. An extremely popular fuel for 2 and 4-stroke engines, it exhibits many of the best qualities of both synthetic and castor, making it a very forgiving general purpose fuel. Also the specified fuel for most Super Tigre engines in the UK.

**Supaglo** contains 16% EDL and 4% castor oil. It is designed for the highest power engines running at maximum output for very extended periods in installations where the cooling is less than adequate.

**Goglo** contains 15% ML70 oil. Although a full "synthetic", with all the advantages of a synthetic, many modellers like it for its characteristics that lie between Dynaglo and Expert Mix.

**Formula Irvine** fuel contains the well known Klotz SuperTechniplate oil. With a total oil content of 18% this fuel is highly recommended by Ripmax for all OS and Irvine Engines.

**Coptamix** with Klotz Heliglo low viscosity oil for high power with long engine life. Contains 18-20% oil depending on NM Content. Mixed with **ICAP** our Ignition and Combustion Additive Pack to maximise the all-round performance.

**Bekra** fuels with 18% oil content - a mix of EDL and Klotz Reg Techniplate and no castor. Designed for and loved by heli flyers but also increasingly used for fixed wing and boating.

**QwikFire** contains 13% EDL and 5% castor oil plus **SPECIAL ADDITIVES** to enable **EASY STARTING** with pullstart car engines.

**QwikSpeed** contains 12% EDL plus **SPECIAL ADDITIVES** for **RACING** with pullstart car engines.

**BE AT THE CUTTING EDGE OF FUEL TECHNOLOGY**

**PUT A SICAL**   
**IN YOUR TANK**

**WITH A SYNERGETIC IGNITION COMBUSTION AND LUBRICATION ADDITIVE PACK**

**THE SICAL ADDITIVE PACK GIVES :-**

- UNCRITICAL NEEDLE SETTINGS
- REDUCED HEAD TEMPERATURES
- CONSISTENT SMOOTH RUNNING
- NOTICEABLE POWER INCREASE
- PROLONGED PEAK POWER RUNS
- SMOOTH RELIABLE TICKOVER
- STRONG DEPENDABLE PICK-UP
- MINIMAL VARNISH AND CARBON
- SUPERB CORROSION PROTECTION
- EXTREMELY LONG ENGINE LIFE

**BigBang** contains 10% EDL plus **SICAL**. Designed for **RACING** with Trucks, Buggies & Racing Cars but equally suitable for Fun Use. 3D flyers are also reporting it to be the best fuel they have ever used.

**Zzip** contains 6%/7% Lite Techniplate oil 2% Reg Techniplate and 2% castor oil. This is American Concept fuel for Cars, Trucks and Bugs. Zzip has all the advantages of castor oil plus the high power and quick pick-up of a low viscosity lubricant. But there is a downside to using Zzip --- if you don't win a race, you can't blame the fuel!

**Special 4-Stroke** contains 9% EDL and 9% castor oil and is formulated for the latest generations of 4-strokes which produce more power and can run much hotter (Except Yamada engines.)

**Yamada** with 23% Klotz Reg T/plate is approved by the UK distributor for all Yamada engines.

**Laser 5** with 15% ML70, 5% Nitro and **SICAL** is a fuel blend that has been tested and approved by **LASER ENGINES** for the complete range of **LASER ENGINES**.

**Tigre Big Brute** contains 6½% EDL and 4½% castor oil and was specially formulated with Mick Wilshere for use with all large Super Tigre engines.

**Castor Straight** with 20% castor oil (for many years the standard lubricant for model fuels) and 80% methanol it is the most basic but successful model engine fuel.

**Expert Mix** contains 20% castor oil. The power and tractability additive package is special and gives a more balanced response than nitromethane only.

**Nitro Mix** contains 20% castor oil with nitromethane only as the power and tractability additive. This is the range demanded by the traditional modeller and it is well tried and tested.

**Diesel Fuels** D1000 is formulated for engines up to 1.5cc or as a running-in fuel for larger engines. D2000 is a general purpose fuel for engines over 1.5cc. D3000 is for high performance racing engines.

**Materials** are specially selected for high quality and purity. **WARNING** Only mix fuels in the open air, do not contaminate skin or clothing, no smoking, no naked flames and avoid electrical switching.

**After-Run Oil** should be put into the engine after each session of use to give additional corrosion protection. It is also a superb general purpose lubricating oil and comes in a spouted container.

**Hi-Viz Fuel Dye** a specially developed fluorescent colouring additive to give fuel a highly visible red colour which enables the helicopter pilot to see the level of fuel in the tank. It can also be used to distinguish between different fuels i.e. 2 and 4-stroke.

**FirePower Glowplugs** the plugs that give optimum timing and optimum mixture **AT THE SAME TIME** plus exceptional **LASTINGPOWER**.

**MaxFlash Glowplugs** the plugs that give optimum timing and optimum mixture **AT THE SAME TIME** with exceptional **THROTTLABILITY**.

**QwikFire Glowplug** the plug with **STARTABILITY** for use with QwikFire fuels.

**QwikSpeed Glowplug** the plug with **RACINGPOWER** for use with QwikSpeed fuels.

**Supercat Glowplug** 'the' plug for 4-Stroke engines.

**3D-Plug** 'the' plug for 3D Flying.

**TrimLine** Self Adhesive Coach Line. A 2½ metre length of 8 different width tapes on one roll. Widths' 0.5, 0.8, 1.3, 2.1, 3.3, 5.0, 7.0 and 10.0 mm. Available in 18 Gorgeous colours.

- **The NitroMethane that we use is typically 99.93% pure**
- **This NM does not contain the carcinogen 2-Nitropropane**
- **Our Methanol is 99.85% pure and conforms to IMPCA spec**
- **An Anti-Foaming agent is routinely added to our fuels**
- **After mixing our fuels are pressure filtered to 1 micron**
- **Legal Child Resistant Closures are fitted to all polys**
